

**BE SAFE  
WITH OUR  
SECURED  
SERVICES**

**“Designed For Safety, Delivered With Precision”**

SES projects pvt ltd provides end to end technical solutions you can rely on gives engineering safety & connectivity for modern building through technology"Smart protection safe living"

## VIDEO SURVEILLANCE

### ▶ ANPR & RLVD APPLICATION

Automatic Number rate Recognition requires sharp, speedy and accurate vehicular intelligence to enable timely interventions for smoother and better traffic control and vehicular operations management.

Pixuate's ANPR enabled - software is built with advanced AI that helps monitor and identify vehicles based on several attributes in real-time, with 95 % accuracy. Traffic management agencies can now use automated and intelligent inputs for uninterrupted and safer traffic management.

### ▶ PEOPLE COUNTING CAMERA

"Detect and count the number of people in a real-time video feed from a surveillance camera. The model should identify individual human figures, differentiate overlapping persons, and track movement across frames to avoid duplicate counting. The system must function accurately in varying lighting conditions, crowd densities, and camera angles." The system should provide hourly counts, peak times, and dwell time analytics, while filtering out staff movements using AI or zone mapping."

## VIDEO SURVEILLANCE

### ► IP / NETWORK SURVEILLANCE

Whether you need to purchase one IP camera or a completely integrated IP camera system, we provide excellent pricing and support.

This includes everything from the camera lens to the network switch and computer systems for recording the video.

Kintronics sells complete IP camera systems for businesses, schools, hospitals, military and other organizations.

### ► VMS & ANALYTICS SOFTWARE

Together with our cameras, it can simplify and freshen up your video surveillance.

With advanced C/S architecture, it fulfills your demands and expectations, with rich core functions including live view, record, E-Map, event alarm and smart analysis etc.

## TIME ATTENDANCE / ACCESS CONTROL

TA (Time and Attendance) systems are the tracking devices used to track and monitor the working time of an employee. These are purely installed in industries where it's hard to supervise hundreds of workers under the same roof. Systems are used by companies of all sizes to record working hours of employees primarily in order to pay their wages. Some companies have a requirement to record the number of hours spent on specific tasks in order to cost jobs accurately. This is referred to as job costing.

**CARD BASED SOLUTION**

**BIOMETRIC SOLUTION**

**USE LIFT WITH CARD**

**FACIAL RECOGNITION BASED SOLUTION**

**HOME SECURITY SYSTEM**

## MULTIPLE APARTMENT VIDEO DOOR PHONE SYSTEM

"A modern home security setup showcasing a multi-appliance video door phone system. A sleek touchscreen monitor is mounted on the wall inside the house, connected with multiple smart devices such as CCTV cameras, smart door lock, intercom units, and mobile app integration. The video door phone screen clearly displays a visitor standing at the main gate, while smaller feeds show live CCTV footage. The background shows a contemporary smart home interior with clean minimal design. High-tech, futuristic, realistic 4K resolution, professional product advertisement style."

## BOOM BARIAR WITH RFID SOLUTION

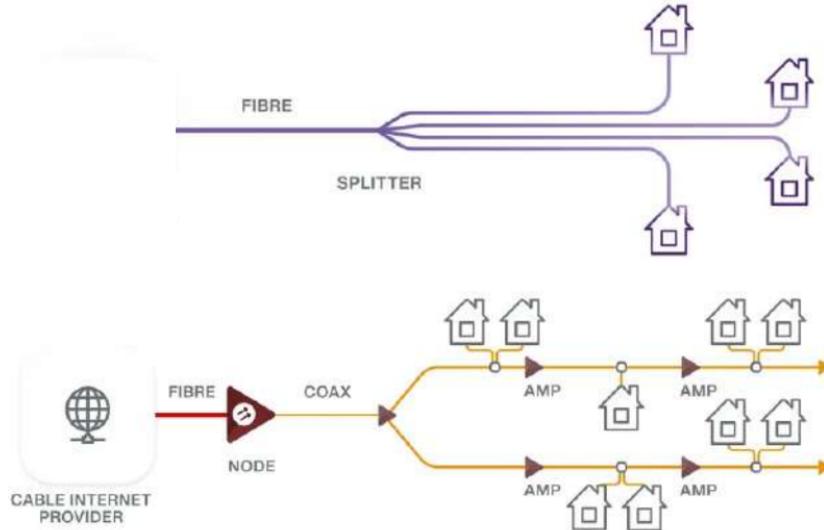

At the entrance of the underground parking lot, a sleek, red-and-white boom barrier stood firmly across the driveway. As each car approached, sensors triggered the barrier to rise smoothly, allowing access only after verifying a ticket or RFID tag. A small camera blinked above, quietly recording every movement. The mechanism was fast, precise, and critical for maintaining order in the busy urban complex.

## FTTH (FIBER TO HOME CONNECTIVITY)

"Design a high-speed Fiber to the Home (FTHC) connectivity system that delivers reliable internet, voice, and IPTV services directly to residential users using optical fiber. Ensure low latency, high bandwidth, and seamless integration with home networks."

# BMS WITH HOME AUTOMATION

Energy Efficient Integrated Building HVAC, Security, Automation and Communication Systems.  
Energy Efficient Integrated Home Security, Automation and Lifestyle Systems

# FIRE HYDRANT AND SAFETY SYSTEM PROJECTS

Fire Hydrant System

Fire System Design & Consultancy

Clean Agent System

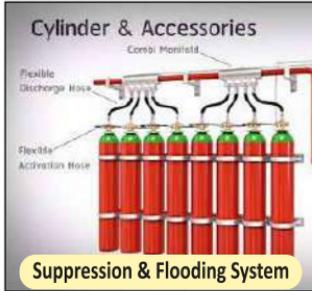

Fire Alarm System

Sprinkler System

Fire Extinguisher

Suppression & Flooding System

Fire Hydrant Accessories

- ✔ Providing site survey & consultancy services.
- ✔ Providing Design solutions as per the norms and preparing BOQ for the site.
- ✔ Providing complete services from site installation, testing, and commissioning to getting NOC from the fire department.
- ✔ Maintenance of fire hydrant system, fire sprinkler system, and fire alarm system.
- ✔ Refilling of fire extinguisher and hydro testing.
- ✔ Installation & Maintenance of fire clear agent system, fire suppression, and flooding system.
- ✔ Doing comprehensive and non-comprehensive Maintenance Contract

## SMART LOCK SYSTEM

Smart locks come in various types, including Bluetooth, Wi-Fi, keypad, biometric, RFID/NFC, smart deadbolts, retrofit models, and Z-Wave/Zigbee-enabled locks. Bluetooth and Wi-Fi locks offer remote and keyless access via smartphones, while keypad and biometric locks use PIN codes or fingerprints for entry. RFID/NFC locks are common in hotels and offices, enabling contactless unlocking. Retrofit locks upgrade existing deadbolts without full replacement, and Z-Wave/Zigbee models integrate with smart home systems for automation. Each type serves different needs, from home security to commercial access control
